MINH ANH (EMERY) NGUYEN

Tampa, FL 33613 | minhanhn@usf.edu | LinkedIn | (+1) 207-413-6684

Objective: Business analyst who applies data and AI to help businesses solve problems, improve operations, and make smarter decisions. I thrive at the intersection of business and data.

EDUCATION

University of South Florida | Judy Genshaft Honors College — **Tampa, FL**
Bachelor of Science, Artificial Intelligence and Business Analytics — *Expected May 2027*
GPA: 3.93/4.0 | **Honors:** Dean's List
Relevant Coursework: Data Mining, Applied Data Science, Python, Database Design & Admin., Data Visualization

EXPERIENCE

Nowledgeworks, LLC — **Remote**
Business Application Developer — *April 2026 - Present*
First intern at a start-up bringing the power of data analytics to Main Street businesses.

Weather-Driven Sales Forecasting (Restaurant Client)
- Developed a forecasting application that predicts restaurant demand from historical sales and weather data, helping the client plan ahead for weather-sensitive outdoor operations.
- Built regression models with AI assistance to quantify how sales are driven by time, humidity, and rainfall; reviewed and corrected AI-suggested code rather than accepting it as-is.
- Earned the client's trust to build a full inventory management system based on the analysis, now in development.

CaterPack — Automated Invoice-to-Packing-List Generator
- Replaced a fully manual, error-prone process with an automated tool — developed with Claude Code — that generates packing lists directly from invoices.
- Eliminated a real operational risk — a single missed item meant a costly return trip or a ruined customer event.
- Projected to save hundreds of hours of manual work annually, set for adoption by the restaurant next summer .

Behavioral AI Laboratory — Muma College of Business at USF — **Tampa, FL**
Research Assistant — *Oct 2025 - Present*
- Researched how AI adoption subtly shapes human decision-making and behavior — often without users realizing it.
- Conducted literature reviews and complete data analysis training to support ongoing behavioral research studies.
- Collected experimental data through Qualtrics surveys and eye-tracking tools.
- Built hypothesis models to test predictions about user/participant behavior.

PROJECTS

Customer Churn Prediction Analysis — Fitness App User Data | Data Mining — **Tampa, FL**
April – May 2025
- Predicted subscription churn for 2,000 users using K-Means clustering to segment customers and identify at-risk groups.
- Built and compared 4 classification models (Decision Tree, Neural Network) in Python, using AI-generated code to accelerate preprocessing while auditing every output before use.
- Found workout engagement — not subscription tier — to be the strongest churn driver, and recommended retention tactics based on the result.

LEADERSHIP & ACTIVITIES

Data Science Club, University of South Florida — **Tampa, FL**
Vice President of Marketing — *May 2025 - May 2026*
- Led a marketing team to coordinate branding and outreach for 800+ club members across the USF campuses.
- Directed the most successful recruitment campaign in club history, **increasing applicants by 250%** and attracting 103 candidates for 12 positions (11.6% acceptance rate).
- Supervised social media content and promotional design, boosting visibility and engagement with a **3,054.6% increase in accounts reached** compared to the prior term.

SKILLS & LANGUAGES

Software Tools: Tableau, Power BI, Excel, Microsoft Office 365, MySQL, PostgreSQL, DBeaver, R Studio, Claude Code
Programming & Web Development: Python, R, JavaScript, HTML, CSS
Certificates: Google's Data Analytics Certifications, Microsoft's Power BI Data Analyst Associate
Languages: English and Vietnamese (bilingual)
