MINH ANH (EMERY) NGUYEN

Tampa, FL | minhanh.emery@gmail.com | linkedin.com/in/minhanh-emery/ | (+1) 207-413-6684 | Open to relocation

Objective: Analyst who uses data and AI to turn POS sales data into insights on consumer purchasing, seeking to help foodservice, CPG, and retail clients make smarter decisions.

EDUCATION

University of South Florida | Judy Genshaft Honors College **Tampa, FL**
Bachelor of Science, Artificial Intelligence and Business Analytics *Expected May 2027*
GPA: 3.93/4.0 | **Honors:** Dean's List
Relevant Coursework: Applied Data Science, Data Mining, Python, Database Design & Admin., Data Visualization

EXPERIENCE

Nowledgeworks, LLC **Remote**
Business Application Developer *April 2026 - Present*

First intern at a start-up bringing the power of data analytics to Main Street businesses.

Weather-Driven Sales Forecasting (Foodservice Client) *June 2026 - Present*
- Built a sales forecasting tool in R for a four-location foodservice client, combining historical Square POS sales data with weather data to estimate demand and support inventory and operational planning.
- Cleaned and quality-checked POS and weather data to ensure data integrity; engineered features and compared multiple regression models using train/test splits, MAE, RMSE, and R^2 to evaluate predictive performance.
- Presented forecast results and their operational implications to the client and company leadership.
- Extended the forecasting work into an inventory management system to support the client's broader operational needs.

CaterPack — Automated Invoice-to-Packing-List Generator *May - June 2026*
- Mapped the client's manual packing workflow and automated it with a Python application, developed with Claude Code, that generates packing lists from invoices to improve order accuracy and quality control.
- Projected to save hundreds of hours of manual work annually, with client adoption planned for summer 2027.

Behavioral AI Laboratory — Muma College of Business at USF **Tampa, FL**
Research Assistant *Oct 2025 - Present*
- Conduct independent research under the mentorship of a professor specializing in AI, examining how AI use subtly influences human behavior and decision-making, often without users' awareness.
- Collect and prepare surveys (Qualtrics) and eye-tracking data for behavioral studies; trained in SPSS and R for analysis.
- Build hypothesis models to test predictions about user/participant behavior.

PROJECTS

Property Data Clean-Up & Quality Audit — Excel Course Project *Oct 2026*
- Turned three years of inconsistent records into one trusted workbook of 8,000+ leases, work orders, and payments for rent and budget planning, standardizing types and labels across three tables with XLOOKUP, COUNTIF, FILTER, UNIQUE, and LET.
- Flagged errors the data couldn't prove instead of guessing, documenting each in a data quality report with counts and verification checks for management.

Customer Churn Prediction Analysis — Data Mining Course Project *April – May 2026*
- Segmented 2,000 fitness app subscribers using K-Means clustering to profile customer behavior and identify at-risk groups.
- Built and compared 4 classification models (2 Decision Tree and 2 Neural Network variants) in Python, finding that workout engagement, not subscription tier, was the strongest churn driver, and translated the finding into retention recommendations.

LEADERSHIP & ACTIVITIES

Data Science Club, University of South Florida **Tampa, FL**
Vice President of Marketing *May 2025 - May 2026*
- Led a marketing team to coordinate branding and outreach for 800+ club members across the USF campuses, presenting recruitment and event plans in PowerPoint.
- Directed the most successful recruitment campaign in club history, increasing applicants by 250% compared to prior term, attracting 103 candidates for 12 positions.
- Supervised social media content and promotional design, boosting visibility and engagement with a 3,054.6% increase in accounts reached compared to the prior term.

SKILLS & LANGUAGES

Software Tools: Excel, PowerPoint, Tableau, Power BI, MySQL, PostgreSQL, R Studio, SPSS, Qualtrics, Square POS, Claude Code.
Programming & Web Development: Python, R, SQL, JavaScript, HTML, CSS.
Analytics: Predictive Modeling, Regression, Customer Segmentation, Classification, Data Cleaning and Quality Control, Survey Research, Data Visualization.
Languages: English and Vietnamese (bilingual).
